Meet Babariya

Quantitative Developer / Trader · 2.5 years live options trading · Python, ML & AI systems

Stuttgart, Germany | +49 163 765 6688 | meetbabariya001@gmail.com | Portfolio | GitHub | LinkedIn | Kaggle

Summary

Business Information Systems student (grade 1.55) with **2.5 years of live index-options trading** and a research workflow built on clean backtests and out-of-sample testing. Ranked **12th in Germany** in IMC Prosperity 4 and top 1% on Kaggle. Currently an ML Benchmark Engineer at Datacurve (Y Combinator). Seeking a **quant research, trading or quant-developer internship** in Germany.

Experience

Jainam Broking — Surat, India
Derivatives Trader — *Apr 2022 – Dec 2024*

- Traded weekly NIFTY and BANKNIFTY index options using delta-neutral structures across expiry cycles.
- Managed real-time hedging and position risk, re-balancing delta and vega exposure as volatility expanded.
- Sized and monitored positions with options-pricing models and Greeks-based limits.

Datacurve (Y Combinator) — Project Eris — Remote
ML Benchmark Engineer (Contract) — *Sep 2026 – Present*

- Design ML benchmark challenges (data pipeline, evaluator, rubrics, reference solution) used to train and evaluate AI agents. Built 25+ designs across vision, sequence and LLM-evaluation tracks.
- Calibrated difficulty statistically using baseline ladders and exact Bayes-optimal decoders to prove information ceilings. Hardened graders against leakage and look-ahead.

Education

Furtwangen University (HFU) — Furtwangen, Germany
B.Sc. International Business Information Systems — *Mar 2025 – Present*

- Current grade: **1.55** · Transcript · Self-study: MIT OCW *Topics in Mathematics with Applications in Finance* (stochastic calculus, derivative pricing)

Quant Research & Projects

Intraday Breakout Strategy — Audit & Improvement | *Python, pandas, 1-min equity data* — *report on request*

- Rebuilt an opening-range breakout strategy from its specification (97% trade-direction match) and showed that ~30% of its reported P&L came from optimistic intrabar fills and zero slippage.
- Diagnosed it as a long-volatility edge: in a regime stress test the same rules lost money in a calm year. A **volatility-scaled trigger** raised Sharpe by 78% and cut drawdown by 35% in walk-forward out-of-sample tests, and a volatility gate removed the losing regime.

QuantPilot — risk-adjusted trader ranking on Hyperliquid | *Python, FastAPI, TypeScript, PostgreSQL* — *code private*

- Ranks perpetual-futures traders by risk- and funding-adjusted returns with a Deflated-Sharpe filter against luck, feeding a non-custodial copy-trading and execution layer. The ranking worker has run on live mainnet data.

Derivatives & Risk Toolkit | *Python, Excel/VBA*

- Black-Scholes vs Heston Fourier pricing engine · delta-hedging P&L simulator · GARCH-driven intraday strategy.
- Portfolio VaR (historical, parametric, Monte Carlo) · OOP Excel/VBA risk report · credit-risk PD / expected-loss models.

Competitions & Achievements

- **IMC Prosperity 4** (algorithmic trading): 230th / 18,803 teams worldwide, **12th in Germany**.
- **AlgoTrade Hackathon 2025** (Zagreb): implemented options market-making and arbitrage strategies in a simulated exchange.
- **Kaggle Competitions Expert** (top 1%): Silver, CIBMTR (120th / 3,325); Bronze, MITSUI Commodity Prediction (165th / 1,711).
- **WorldQuant BRAIN**: Gold level in the WorldQuant Challenge.

Certifications

NISM Series-VIII Equity Derivatives & Series-XV Research Analyst (SEBI, India) · Applied Data Science Lab, WorldQuant University

Skills

Quant / Finance	Options pricing & Greeks, delta-neutral hedging, volatility modelling (GARCH, Heston), Monte Carlo, VaR / CVaR, portfolio optimisation, backtesting & walk-forward validation, market microstructure
Programming	Python (pandas, NumPy, SciPy, scikit-learn, PyTorch), SQL, C++, R, TypeScript, Excel / VBA
ML / AI	Gradient boosting, time-series ML, deep learning, LLM agents & RAG, model evaluation
Languages	English (fluent), German (A2, actively learning)
